FACULTY MENTOR DEPARTMENT

Neurology – Gainesville

RESEARCH PROJECT DESCRIPTION

Analysis of data from inter-disciplinary concussion clinic database data to develop more refined criteria to best determine objective criteria for determining clinical; phenotype and recovery trajectory of concussion injuries. Data includes vestibulo-ocular measurements, neuropsychological assessment, history, and neurological examination, and treatment courses. Newer assessments and data include evaluation with GaitRite, and vestibular equipment. The student will work with mentor to help formulate a clinical question to be further evaluated and correlated with available data.
