This MSRP project is focused on generating scholarly publications and guiding the medical student in research, collaboration and medical writing. One of the main goals is to collaborate on a book chapter in an innovative Atlas of Hysteroscopy. The chapter will include a magnitude of hysteroscopic images and videos on hysteroscopy in the atrophic endometrium and uterine cavity. The images will be gathered through collaboration with hysteroscopic surgeons throughout the world via social media, published work and other book chapters. The different patterns and findings associated with atrophic endometrium will be described and organized in a book chapter in collaboration with a large group of prominent international hysteroscopic surgeons. The student will be involved in other research, writing activities and surgical video-editing as well.
